ASUS ExpertBook P5440

Secure Inside & Out with BIOS-SHIELD™

ASUS creates solutions to meet business needs and increase productivity. With a product lineup to match small and medium-sized businesses, we have engineered the ASUS ExpertBook P5440 to ensure your product is tough to endure daily activities. ASUS has partnered with Janus Technologies to elevate endpoint security by blocking threats, protecting data and managing your devices remotely with a cloud subscription, BIOS-SHIELD™.

BIOS-SHIELD™ is different from other security solutions. With an added layer of protection between the laptop and operating system, this new technology delivers greater security. Unlike traditional PCs where the security and management reside within the software, BIOS-SHIELD™ transforms the PC enabling security and management to flow directly from the hardware. Together, the ASUS ExpertBook P5440 and BIOS-SHIELD provide small to mid-size businesses peace of mind with commercial-level security.
